How to setup sectionplot package on our local server

xianmin@ualberta.ca

- create a new folder for your project, e.g., /home/YourUserName/sectionplot
- run this script: copySectionPlotCode.sh

  /mnt/storage0/xhu/nemo_plot/sectionplot/ANHA4/copySectionPlotCode.sh /home/YourUserName/sectionplot

- what you have under the sectionplot folder (copySectionPlotCode.sh)

```
#copy main scripts
cp ${codeRoot}/drawLonLatSectionProj.m .  # to choose the section interactively
cp ${codeRoot}/getSection.m .             # interpolation for tracers
cp ${codeRoot}/getSectionUV.m .           # interpolation for vectors
cp ${codeRoot}/getInverseDistanceWGT.m .  # to compute the weight file
cp ${codeRoot}/combineSectionTSUV.m .     # to combine the T, S and uv outputs
cp ${codeRoot}/getTopoTrack.m .           # to get topography data along a track (only for Northern Hemisphere)
cp ${codeRoot}/RescaleData.m .            # rescale the data for non-linear plot
cp ${codeRoot}/showSection.m .            # to visualize the section
cp ${codeRoot}/smoothDist.m .             # distance based interpolation actually
cp ${codeRoot}/getSectionMOY.m .          # time averaging over a single period, e.g., July 2002 to March 2003
cp ${codeRoot}/getSectionMMM.m .          # time averaging for the same period in each year, e.g., March to July for 2002 and 2003
                                          # MMM stands for Multiple-Month-Multiple-year
#copy examples
cp ${codeRoot}/smoothSectionTest.m .              # test script to show the interpolated points along a section
cp ${codeRoot}/getSection_example.m .             # example script to exact the fields along a section
cp ${codeRoot}/showSection_example.m .            # an example script to show how to visualize the fields along a section
cp ${codeRoot}/showSection_example_Nonlinear.m .  # an example script to show how to make the non-linear scaled plot
```
