

How to run Ariane

Step 1:

Copy the Setup_run_ariane directory, PBSArianeJob.sh, and runPBSArianeJob.sh into your ARIANE directory

Step 2:

Set up Ariane in matlab

```
module load matlab/2017a
matlab
```

```
DropLocationsMap.m
```

```
Arriba_Ariane
```

```
create_initial_position_SOI
```

specify number of particles,
location, depth, and number
of locations

```
copy_initial_position
```

modify month of release

```
copy_files
```

```
create_namelist
```

modify drop year and tracking time

```
run_ariane
```

this script creates the
directories you'll need
for the runs with the
ariane files you will use.
It also creates the initial
position file.

Step 3:

Run Ariane

```
./runPBSArianeJob.sh
```

```
PBSArianeJob.sh
```

When the submission is finished you will have a file called
ariane_trajectories_qualitative.nc. This file will have the information
you need for the analysis such as initial positions, the lon lat depth
time etc of the trajectory.
